Professional Summary

Aspiring software engineer with strong knowledge in python, C, C++ specializing in machine learning, natural language Processing (NLP) and data science. Experienced in developing and deploying full-stack web applications using Flask and Fastapi with expertise in database including MongoDB and MySQL (RDBMS). Skilled in building AI-powered solutions for sentiment analysis, summarization, information extraction and data visualization. Proven ability to contribute to team projects and deliver results, as demonstrated through academic projects and a hands-on internship at ISRO.

Education

- **SJB Institute of Technology,** B.E in computer science engg. (Data Science) (2022 – 2026) -- **CGPA: 8.7**
- **SDM Residential PU College,** PUC (2020 – 2022) -- **percentage: 87.67%**
- **Sri Ramakunjeshwara high School,** 10th std -- **percentage: 91.68%**

Experience

- **INDIAN SPACE RESEARCH ORGANISATION (ISRO)** -Intern ***March2025 – April 2025***
  - Completed my internship at ISRO-URSC in Space Navigation Group (**SNG**).
  - Worked on the transition from c programming to python programming to store the geo coordinates sent from satellites of their position. Storing data from files system to PostgreSQL.
  - Built database that converts satellites geo coordinates into latitude and longitude and stores into database as soon as the geo coordinates are received, worked with satellite database.

Projects

- **Ai-driven Health care platform | Python, fastapi, MongoDB, Whisper:**
  - Developed a complete healthcare platform providing wellness plans, appointment booking and medical record management for patients.
  - Enabled real-time audio consultations for doctors with integrated appointment scheduling based on AI-driven symptom severity analysis (whisper +LLM).
  - Built an AI-powered doctor workspace where LLMs can summarize lengthy medical records, answers patient-specific queries and auto generate structured prescriptions and reports.
- **Market Basket Analysis [Machine Learning Project]:**
  - Processed and cleaned a dataset of 500,000+ retail transactions using Pandas and NumPy to engineer features for machine learning models.
  - Developed a Market Basket Analysis system using the Apriori algorithm to identify product associations with high lift (>1), facilitating strategic product bundling and cross-selling initiatives.
  - Segmented a customer base of 4,000+ unique IDs into 4 strategic groups using K-Means clustering, enabling personalized marketing campaigns based on spending behaviour and visit frequency. Visualized complex transactional data and association rules using Seaborn to present actionable business insights to stakeholders.

Research & Publications

- **Arogya-AI: AI Driven Healthcare Platform for Travel Doctors – Survey**
  Accepted at *International Journal of Creative Research Thoughts (IJCRT) (2025)*–ViewStatus (IJCRT_289998)

Technologies

- **Languages:** C, Python, C++ **Web & Databases:** Flask, Django, Fastapi, SQL, MongoDB, PostgreSQL
- **Software development Tools:** VS Code, Jupyter, Power BI, Git, GitHub, google colab, Pandas, NumPy.
- **AI & Deep learning:** Transformers, Whisper, GenAI, NLP (sentiment analysis, summarization)

Certificates

- Internship Certificate [certificate]
- Python for data science, NPTEL [view certificate]
- Powerbi certificate [view certificate]
